

SED 2008
13 - 15 May 2008

Rockingham – Stand L/793

PRESS RELEASE

Faresin Industries: all the power you need

Faresin Handlers, the line of telescopic handlers produced and distributed by Faresin Industries of Breganze, will exhibit two of their most representative machines at SED 2008.

More precisely, Faresin Handlers will exhibit two of their telescopic elevators, the 6.28 and the 17.40 with proportional system.

The first is a compact, extremely versatile machine with a full range of available optional accessories. The second, on the other hand, is one of the most powerful machines produced by Faresin Handlers, capable of lifting weights of up to 4 tons and featuring an electroproportional system that gives the operator greater sensitivity in operating the boom.

Make way for the crown jewels of the Faresin range! The 6.25 Wallaby was introduced to the market just a year ago and it has already become a must for anyone working in the agricultural, construction and industrial sectors. It is the smallest telescopic handler currently on the market, but it is capable of lifting 2.5 tons to a height of 6m. Its reduced dimensions and small footprint make it indispensable for operating in tight spaces that the other telescopic handlers cannot get to.

Our Roto 18.45 has also been on the market for a year. This machine is the top of the Faresin Handlers range, featuring an Iveco Tier 3 engine and 360° rotating platform. It is proving to be extremely successful, appreciated and valued for its reliability on the work site and its state of the art technology that make it a safe, powerful and precise machine.

Moreover, from this year, the new 130 HP Iveco turbo intercooler engine that meets TIER 3 emissions standards is available for all the over-7m models.

FH continues to add to the vast array of features, both standard and optional, available for their machines, because their basic aim is to provide customers with all the comfort, adaptability and safety they need to carry out their work as well as possible.
